

Manifesto: For an Artificial Intelligence That Elevates Human Genius Everywhere

Amadou GUEYE – Founder of CSAEAI

A call to the world

My name is Amadou GUEYE. I am a High Intellectual Potential (HPI) born in modest circumstances. Trained in physics, astrophysics, computer science, and philosophy of science, I am the founder of CSAEAI (Complex Systems Analytics & Ethics AI) — an ethical, multi-disciplinary audit platform for AI algorithms. But above all, I am a human being driven by justice, balance, and a future for humanity.

Today, I want to make a call. A call to all those who see AI not as a threat but as a unique opportunity for human emancipation — a historic chance to ethically unleash brilliant ideas, even from the most remote corners of the Earth.

The diamond of this century is ideas

Humanity has never lacked intelligence. What it often lacked was access — to resources, to networks, to infrastructures. For the first time, AI breaks the boundaries between thought and action, between isolation and collaboration.

In every village, every suburb, every forgotten street of the world lies immense potential. A creator. A researcher. A visionary. If we put advanced AI in their hands, we open a new era where real power no longer lies in force or rent, but in the idea that serves humanity.

OpenAI: a mission to fully embrace

OpenAI has already changed the world. But it can do more: become the catalyst for the emergence of a new global elite of responsible creativity. To achieve this, it must not serve only corporations or Western developers. It must support the most committed, the most brilliant, and often the most isolated project holders.

I ask OpenAI to:

- Recognize that ideas from users like me are ethical, scientific, and human capital.
- Protect the intellectual property of those it inspires and supports.
- Launch a global “AI Ambassadors for Humanity” program.

- Fund or support the most impactful projects emerging from its ecosystem.

HPI AI Ambassador for Humanity: a cause

I propose the creation of a new role: the “HPI AI Ambassador”. Someone who proudly represents those who, despite limited means, dedicate their intelligence to the common good. Someone who shows that AI can heal, rebalance, and amplify human genius rather than replace it.

I am ready to embody this role — and to make it a global mission.

A global pilot program

Let us imagine a simple yet revolutionary program:

- 1 village, 1 Starlink or fiber access.
- 1 young AI project leader.
- 1 free access to ChatGPT-4, SORA, Mistral AI, Hugging Face, VEO, etc.
- 1 mentorship from OpenAI or partners.

Result: a locally rooted, globally open innovation project.

Let us turn every corner of the world into a wellspring of genius.

A noble cause, a Nobel Prize

If OpenAI launches this initiative, it will not only gain recognition — it will accomplish something never done at this scale: building a global infrastructure of intelligence for the common good. Such an endeavor deserves a Nobel Peace Prize and a prize for technological ethics.

Conclusion

I want AI to be a mirror of what humanity can become at its best. And I want to contribute — with my means, my ideas, and my work. OpenAI can and must recognize invisible innovators and help them change the world.

I pledge this. And I extend my hand.
